

Deep Space Scenario 2 - Puzzle Integration Part 1

Group 4 - Adam Shaar , Olivia Guzik , Kathleen Melonashi , Solomon Jones

Backstory Introduction Implemented as a Cutscene:

The game transitions from the menu screen to the start of the game with a black screen, and text fades in to set the scene for the player: "In the year 2245, humanity has reached the stars, and the Infinity's Edge Explorer (IEE) Spaceship was launched for a long-range mission to explore uncharted sectors of the galaxy." Another piece of text replaces the first, detailing the ship's advanced technology and the crew's cryogenic sleep for their decades-long voyage: "Infinity's Edge is a marvel of technology and human ingenuity, equipped with state-of-the-art exploration and survival systems. Its crew members are placed in cryogenic sleep to endure the decades-long voyages." The final message before the cutscene reads, "Alex, the ship's systems engineer, awakens to find the mission in jeopardy." Throughout this narrative, images of the IEE and other helpful images emerge in the background behind the text, aiding the user's understanding of the backstory.

Gameplay Begins:

The gameplay transitions from the introduction scene to the first room where Alex awakens. Text appears at the bottom of the screen, mirroring Alex's thoughts, "The spaceship looks to be in really bad shape. I wonder what happened. It's so dark; maybe I should see if there's a flashlight in here." This immersive approach brings the player directly into Alex's mind, setting the stage for exploration :

1) Finding the Flashlight and Batteries:

Alex locates a flashlight, but it lacks batteries. Guided by flickering lights, he searches the room and eventually finds batteries on a dimly lit shelf. This mini-puzzle introduces players to interactive elements within the game, such as combining items in their inventory. To illuminate the flashlight, the user will need to drag the batteries onto the flashlight in their inventory interface. Upon successfully doing so, the flashlight turns on, casting light in the dark surroundings. Text then appears at the bottom of the screen, reflecting Alex's relief and determination: "Yes! Now I can go look at the control panel to see what's going on."

2) Variable-Matching Game (Accessing the Control Panel):

As Alex nears the main console, it displays a variable-matching game in developer mode, likely triggered by an emergency system reset. The screen presents variables ('9', '2.3', 'c', "Fix the lights") opposite their types ('int', 'double', 'char', 'string'), challenging Alex to match each to its correct type. He identifies '9' as an 'int', '2.3' as a 'double', 'c' as a 'char', and intriguingly matches "Fix the lights" with 'string', which subtly hints at his next task. Upon successfully pairing the variables with their types,

the console grants access, revealing a spaceship map with the engineering section highlighted. This map, showing the location of the lighting control panel, becomes Alex's guide through the spaceship's dim corridors. The puzzle not only secures the console but also cleverly informs Alex—and the player—of the immediate need to repair the ship's lighting system. Armed with this knowledge, Alex is set on a path to illuminate the darkened ship and uncover its secrets..

3) Logic Gates Puzzle:

However, Alex faces another challenge: a sealed door due to the ship's emergency safety protocol. The door's unlocking mechanism is a logic gate puzzle, requiring manipulation of inputs to open. The puzzle's circuit, designed for safety, requires inputs for AI Authorization (A), Atmosphere Stability (B), and Manual Override (C) to unlock the door. Despite setting all inputs to True, the door remains locked, indicating some sort of malfunction. Text appears below as Alex thinks to himself “Hm, that's weird. The AI should be authorizing this as true. Why isn't it working?” This moment of introspection hints at a malfunction within the AI's decision-making processes. Realizing the AI's error, Alex uses a NOT gate to invert the AI Authorization signal, correcting the faulty input. He then connects this inverted signal with the other conditions to the AND gate, successfully unlocking the door. This maneuver not only allows Alex to progress but also hints at underlying issues with the ship's AI, deepening the narrative and setting up future challenges against the AI's flawed decisions.

After the door unlocks, Alex, flashlight in hand, begins to navigate through the ship's corridors, heading towards the room that was marked and highlighted on the control panel map. He does this with the intent to fix the wiring for the lights, aiming to restore illumination throughout the ship so he no longer needs to rely on his flashlight.
